SUMMARY

Software Engineer with 4 years of professional experience building backend systems in Java / Spring Boot and Python. Experienced in REST and GraphQL APIs, fintech integrations, JWT-based security, large-scale data validation with PySpark, and secure delivery of AI models. Focused on clean, well-tested code, design patterns and microservices, using AI-assisted development to ship faster.

WORK EXPERIENCE

Backend Developer

AlgorithIA, Grupo Salinas | Aug 2023 - Present

- Led follow-up of 2 projects, breaking designs into macro tasks and subtasks and completing the remaining development.
- Designed a Python library to securely run ML models with signed licenses, encrypted weights and hash-chained audit logs.
- Kept end-to-end execution under 30 ms, with about half of runtime in inference and the rest in security controls.
- Built REST APIs secured with JWT authentication and authorization, meeting a 200 ms latency target.
- Built Python REST APIs for AI models and Spring Boot APIs for statistics; refactored AWS Lambdas (Builder Pattern).
- Built a Great Expectations + PySpark data-validation workflow for enterprise tables with billions of records.
- Fixed out-of-memory crashes in multi-table validation runs by releasing Spark memory after each table load.
- Tuned Spark session configurations, improving query response times on Hive and Impala datasets in Cloudera.
- Built a Streamlit dashboard to visualize data-quality results across enterprise tables.
- Use Claude as an AI coding assistant, cutting development time by ~30% and unit-test writing time by ~50%.

Backend Developer

Accionamos Tus Datos (ATD), Grupo Salinas | Aug 2022 - Aug 2023

- Built Spring Boot services to retrieve bank accounts and categorized transactions from an external financial provider.
- Implemented JWT authentication and authorization, including token generation, cryptographic signing and validation.
- Integrated external financial APIs and webhook-based async processing; designed REST and GraphQL endpoints.
- Took ownership of an internal Java SDK after the tech lead's departure while mentoring a junior teammate.
- Shipped features across three Grails microservices and a Firebase push-notification service; tested with Mockito/Spock.

EDUCATION

B.E. Computational Systems Engineering
ESCOM – Instituto Politécnico Nacional
2017 - 2022

Azure Fundamentals (AZ-900)
Microsoft Certified
2021

SKILLS

- Languages: Java, Python, SQL, JavaScript, Groovy, C
- Backend: Spring Boot, Flask, REST, GraphQL, JWT, Microservices, Design Patterns
- Data & Cloud: PySpark, Hive, Great Expectations, AWS Lambda, Azure, MongoDB, MySQL
- Tools: Git, Mockito, Spock, Claude (AI-assisted development), Scrum / Kanban

LANGUAGES

- Spanish — Native | English — Upper-Intermediate (B2)
